Week 10 Reading: Design storms and storm transposition (bring two questions Wednesday)

How design storms and storm transposition give different flood and damage estimates

2026-10-26

Read Baer et al. (2026) (open access, doi.org/10.1038/s44304-026-00208-5) before Wednesday's class (10/28).

Focus on the rainfall, meaning how the storms were built and sampled, and on the impacts, meaning how the flood damage differs between design storms and storm transposition. Skim the flood modeling.

Bring two questions about the paper. Wednesday is a worksheet in pairs with no computers, so bring your notes on paper.
